500+ Live Debates

17 Years Bench Science

PhD, UC Riverside

KEYNOTE TOPICS

The Science of Changing Minds

What 500+ live debates taught me about persuasion, cognitive bias, and when evidence actually works. For corporate, education, and public health audiences.

Fighting Misinformation in Real Time

Lessons from the front lines of the science denial wars. How misinformation spreads, why it sticks, and what organizations can do about it. For media, tech, and healthcare.

From the Lab to the Stage

Building authority, audience, and impact as a working scientist. Why the ivory tower approach is failing and what the next generation of science communication looks like. For STEM and education.

AI, Democracy & Evidence-Based Action

How AI-powered tools can help pro-science communities organize politically for the first time. The ethics, the infrastructure, and the urgency. For tech, policy, and civic audiences.

ABOUT DR. GREG

Dr. Gregory Newkirk is a molecular biologist (PhD, UC Riverside), science communicator, and the host of The Dr Greg Show, a nightly live science education and current events show where he teaches complex science to everyday audiences and fights misinformation where it actually lives — live, in real time on TikTok and YouTube. With 6 million views since August 2025 and a 7.78% engagement rate, he has built one of the fastest-growing science debate platforms online. His 17-year career spans BASF, Cibus, and UC San Diego, with publications in *Nature Nanotechnology* and *ACS Nano*. He is an NDSEG Fellow and holds a U.S. patent in nanoparticle delivery systems. A performer since childhood who chose science because performing wasn't enough — he wanted to actually change things. After 17 years in the lab and pioneering nanotechnology research, he saw a gap no one was filling: scientists weren't showing up where misinformation actually lives. So he built The Dr Greg Show to do exactly that. He recently debated Kent Hovind, one of the world's most prominent young earth creationists, in a 1-hour-49-minute live broadcast on Modern Day Debates.
